Poster Presentation Guidelines

SAPA will provide 4 feet high by 8 feet wide mounting surfaces for poster presentations. (See example below) Presenters may only use thumbtacks or push pins to mount their posters. No other material (tape, glue, putty, ect.) may be used. No other audiovisual equipment may be used. You are responsible for providing your own mounting materials.

The poster presentation must include the following sections: Introduction/Purpose, Procedures/methodology, Results and Conclusions/Discussion.

All illustrations (graphs, pictures, figures and/or tables) should be large enough for easy observation. Matte finish on graphs or pictures gives the best visibility. All figures and tables should have brief captions.

Presenters are responsible for the transportation, set-up, and removal of their presentation. Do not mail poster material to meeting headquarters.

Consider constructing your poster in several small sections for ease of transport and placement on the mounting board.

Sample Presentation Layout
